Change Amazon Lambda Cloud Processing Service for Email Piping

Email Management · https://fluentsupport.com/docs/change-amazon-lambda-cloud-processing-service-for-email-piping/

This article will help you through the steps required to change your default **Amazon Lambda Cloud Processing** service and implement another one for **Email Piping** in **Fluent Support.**

How to Change the Amazon Lambda Cloud Processing Service

To learn how to change the **Amazon Lambda Cloud Processing** service and implement your own **Lambda** function for Fluent Support Email Piping, refer to the Repository below —

https://github.com/WPManageNinja/fluent-support-email-parser

Please use this repository. It's the simplified version of our own implementation, but the mime parser is the same as our hosted one.

Notes:
- You need a bit of JS and serverless knowledge to deploy this function
- You need an extra domain to connect it with Amazon SES's incoming endpoint. </aside>

If you want to know more details about Email Piping, you can also read this **What is Email Piping and Why?**
If you have any further questions, concerns, or suggestions, please do not hesitate to contact our **@support team.** Thank you.
